HOW TRIVETT'S TESTED SEEDS ARE STORED

All our flower and vegetable seeds are stored and preserved in steel drawers, especially constructed for this purpose; the bodies are formed from one piece of galvanized sheet steel and are housed in steel-lined cabinets.

Steel seed drawer, showing the body cut from one piece of steel

The danger of mixing is reduced to a minimum, the seed is protected from dust, insects, mice, etc. Every up-to-date method is employed by us to assure the proper storing and preserving of seed during the selling season.

TRIVETT'S TESTED SEEDS

are tested for germinating powers, in electrically heated testing machines, at an even temperature and under moisture conditions similar to those of the average greenhouse or hotbed.

Trivett's Tested Seeds are also tested for purity, they will be found exceptionally clean and free from grit and foreign material.

PLANT TUBS

Highest Grade

Much can be said in praise of the wood our tubs are made from, namely, "Heart Cypress," but briefly, it has proved to be decidedly superior to all other woods, not only in durability but in appearance. It does not need a coating as a filler, as the wood naturally contains a certain amount of oil. Consequently it does not warp, shrink or swell, and in general it is *the* wood for plant tubs.

The workmanship on these tubs is equally good. No tub goes from the shops that has not been thoroughly made, and made to last for years, and our tubs are serviceable for practically every situation.

If you need tubs, buy good ones, and they will last you for many years. Most tubs, of course, look alike when they are freshly painted, but it is only after using them that their value can be realized.
